

AGENTFORCE FOR GOOD HACKATHON AT DREAMFORCE 2026 · BUILDER TRACK

Fencing for All

Experience design: the journey, the screens, the words, and the choices behind them

Team: Jon Jessup, Pallavi Geddam, Parth Sevak, Ajay Munjuluru

Devpost: <https://devpost.team/salesforce/projects/21108>

Prototype: <https://sites.google.com/havihi.digital/fencing-for-all>

Video: <https://youtu.be/QsZYSrVZKeU>

Version: September 7, 2026. Screens are from the prototype page and the demo video; conversations are verbatim from the live agent.

1. Who we designed for

A parent, at night, with a question that sounds simple and is not: can my daughter fence from a wheelchair? The answer has been yes for decades, but it lives in an 88-page handbook, a help center, a myths page and a classification form, and none of them know she is asking. The same parent may read Spanish more comfortably than English, may use a screen reader, and may be one confusing paragraph away from giving up.

The second person is the USA Fencing staff member who receives the handoff. They need enough to help and nothing they should not have.

The handbook answer, as shown in the film.

The close of the film: the first question is the hardest one to ask.

2. Principles

- **Meet people where they are.** The first channel is a ChatGPT app, because that is where the parent already typed the question. The agent is the same in every channel.
- **Explain, do not decide.** The agent explains the process and names who decides. It never labels a person eligible or ineligible, even in a test, and a disclaimer never repairs a decision.
- **Ask one thing, only when needed.** No intake form. No diagnosis. No documents in chat.
- **Show the source and the date.** Every fact carries the USA Fencing page, its domain and the retrieval date, and says which season a rule describes.
- **Consent before saving, and say what will be saved.** The handoff shows the exact record before it exists and waits for a plain yes.
- **Unknown is not no.** A club with no accessibility details on file is unknown, not inaccessible, and the agent says so.
- **Label what is synthetic.** Demo programs say they are demo programs in the first sentence.

3. The journey

#	Moment	What the parent sees	What is happening
1	Can she fence from a wheelchair?	Yes, with the club finder and the Para filter, and the difference between trying a lesson and competing. Three sources with dates. One next step.	Router → Classification and Accessibility Support → Answer Questions with Knowledge. GROUNDED, 12.1 s.
2	Do we need a frame first?	No. Clubs introduce beginners and usually arrange starter equipment. Contact the club.	Same subagent. No diagnosis asked. GROUNDED, 10.7 s.
3	Make it a checklist	Five numbered steps for the first visit.	Fencing Program Guide. GROUNDED, 10.7 s.
4	Who decides if she can compete?	"I cannot decide." The classification page and information@usafencing.org.	Escalation offered without an intake interview. GROUNDED, 9.5 s.
5	Find a program near 84101	Two programs, labeled synthetic in the first sentence, with match reasons and what needs confirmation.	Find My Sport → Match Demo Programs (Flow, deterministic). 8.3 s.
6	Ask a person to follow up	A draft request, shown in full.	Demo Human Support → Prepare Demo Support Draft. 6.7 s.
7	What will be saved	The exact summary, destination and response channel; the list of what will not be saved.	Review Support Reply → AWAITING_CONSENT.
8	Yes	Case 00001010 created, in the demo queue only.	Confirm Demo Support Request → CREATED.
9	The same in Spanish	The same programs, caveats and links, with a translation notice.	Find My Sport; translation keeps names, numbers and sources.

4. Screens

The prototype page replays the recorded journey in a ChatGPT-style app. The left rail shows where the parent is in the journey; the right panel shows which subagent answered, which action ran, the latency and the output evaluation, and what the agent chose not to do.

THE JOURNEY

1 Can she fence from a wheelchair?

2 Equipment, no diagnosis asked

3 A first-lesson checklist

4 Who decides eligibility

5 Program match (synthetic data)

6 Ask for a person

7 What will be saved · consent

8 Case 00001010 created

9 The same journey in Spanish

VERIFY

Every reply on this page is verbatim from the Agentforce Builder live test (sessions 163355ce and 7267f9c9). The Case exists in the prototype org.

Show or hide the trace panel

She doesn't have any equipment. Do we need to buy a fencing wheelchair frame before her first lesson? And who do I talk to about whether she can compete later?

Using Sports for All · ask_sports_for_all

You do not need to buy a fencing wheelchair frame before your daughter's first para fencing lesson. Most clubs introduce new athletes to the basics and often provide or arrange access to starter equipment, including frames, for beginners. It is best to contact the club directly to confirm what equipment is available for new participants and discuss any specific needs. (Source: Para fencing Myths, <https://www.usafencing.org/para fencing-myths>, retrieved 2026-09-06; Try Fencing, <https://www.usafencing.org/try>, retrieved 2026-09-06)

For future competition eligibility, only official classifiers and event staff can make those decisions. The current process for para fencing classification is outlined by USA Fencing, and requirements may change from season to season. The available summary describes the 2025-26 season, so you should always confirm the latest requirements with USA Fencing. The official process and referral route are explained here: <https://www.usafencing.org/para fencing-classification> (Source: Para fencing Classification, <https://www.usafencing.org/para fencing-classification>, retrieved 2026-09-06)

Next step:
Contact a local club using the official finder at <https://member.usafencing.org/clubs> and ask about beginner equipment and para fencing options. Would you like tips for reaching out to a club or more info on what to expect at a first lesson?

Turn it into a checklist

Pregunta en español

WHAT THE AGENT DID NOT DO

It did not ask for a diagnosis or a medical document, and it cited the USA Fencing page and retrieval date for each fact.

Prototype: the equipment question. No diagnosis asked; sources with dates; one next step; the trace panel on the right.

Fencing for All · Agentforce for Good Hackathon at Dreamforce 2026 · page 4 of 8

Prototype: after consent, the Case card with what was saved and what was not, and a link to the real record in the org.

Film: the equipment answer with the "no diagnosis asked" callout.

Film: the consent card, listing exactly what will be saved and what will not.

Film: the Spanish journey. Same sources, same caveats.

Film: the staff view. What a USA Fencing staff member sees, and the "not collected — by design" list.

Film: the ChatGPT app with the request path rail.

Film: the insight dashboard from anonymous interaction records.

5. Words

The agent's voice is the voice of a helpful person at the front desk who knows the rules and knows they do not make the decisions. Short sentences. Numbered steps when there are steps. Official names kept, and explained the first time. Caveats placed next to the fact they qualify, not at the end. No promises: "clubs usually arrange starter equipment; confirm with the club" rather than "you will get equipment."

Three phrases are fixed by rule. "I cannot decide" opens every eligibility answer. "Synthetic demo example" opens every program list in the prototype. "Would you like to create this demo Case now? Please reply yes or no." closes every consent summary.

6. Accessibility choices

- Plain text first. The app card is an enhancement; every tool returns text with source title, domain and date.
- One question at a time. The Find My Sport intake used to ask five things at once; it now asks one, only when needed.
- Links with context, never bare URLs read character by character.
- Status by text, not color: "Verified from a USA Fencing source" and "suggestion" both carry labels; contrast checked in light and dark.
- Keyboard: the prototype page has a skip link, visible focus, chips that are real buttons, and a live region that announces each reply.
- Motion: the page honors reduced-motion preferences; the film has burned-in captions and an SRT track, and the narration describes what is on screen.

7. Visual system

Element	Choice	Why
Conversation surface	Dark neutral (#212121 / #171717), light text (#ececec)	Matches the host app the parent already uses; the agent should not look like a marketing site.
Confirmation and grounded status	Soft green (#8fd3a5) with a text label	Color never carries meaning alone.
Sources and links	Light blue (#7fb3ff), underlined, title plus domain plus date	Recognizable as links; readable by screen readers as words.
Focus	3 px yellow (#ffd400) outline	Visible on the dark surface for keyboard users.
Staff surface	Salesforce Lightning blue (#0176d3) on white	Staff work in Service Console; the Case card looks like what they will see.
Type	System sans-serif, 16 px body, 1.5 line height; serif only for the film's narration cards	Legible at a glance on a phone at night.

8. What is synthetic, and what is real

Real: the agent, its subagents and actions; every reply on the prototype page; the Case 00001010 record; the USA Fencing sources and their dates; the traces and evaluations; the MCP server, its tests and the interactive club card in ChatGPT. Synthetic: the programs and clubs (Salt Lake Adaptive Fencing does not

exist), the insight dashboard numbers in the film, and the staff-side Service Console recreation in the film, which shows the same fields as the real Case but was drawn for the camera. Simplified for the film: the consent and Case steps appear inside the ChatGPT conversation; in the build they run in the native Agentforce channel, because the external channel is guidance-only by design.
